

国外最近刊行誌参考記事目次

Journal of the Iron and Steel Institute 194

(1960) Part 2

Tempering characteristics of low-carbon low-alloy steels. *K. J. Irvine, et alius.* p. 137Changes in mechanical properties of steels caused by fatigue stressing. *G. F. Modlen, et alius.* p. 154Kinetics of first-stage graphitization in Fe-C and Fe-Co-C alloys. *A. S. Appleton.* p. 160Constitution of iron-niobium-silicon system. *H. J. Goldschmidt.* p. 169Stress corrosion of austenitic stainless steel by high-temperature solutions. *P. P. Snowden.* p. 181Accuracy of point counting in metallographic investigations. *T. Gladman, et alius.* p. 189Spectrographic determination of residual elements in steel by the excitation index technique. *K. M. Bills.* p. 193Determination of trace elements. *N. W. H. Addink.* p. 199Gaseous reduction of fine iron ores. *S. Y. M. Ezz, et alius.* p. 211Liquidus-solidus relations in the system Fe-Al. *J. R. Lee.* p. 222Developments in electrical equipment for reversing plate mills. *H. S. Brown, et alius.* p. 225Some aspects of plate-mill design and layout. *A. Marshall.* p. 240

Journal of Metals (1960) Apr.

Quo Vadis blast furnace? *M. O. Holowaty.* p. 309Self-agglomerating fluidized-bed reduction. *B. G. Langston.* p. 312Nu-iron, a fluidized-bed reduction process. *T. F. Reed, et alii.* p. 317H-iron, production by Alan Wood. *R. A. Lubker, et alius.* p. 321How oxygen input affects open-hearth steel-making. *A. L. Hodge, et alius.* p. 325Factors affecting temperature drop between tapping and teeming. *N. L. Samways, et alius.* p. 331

Stahl und Eisen 80 (1960) Heft 6

Measuring the roughness of cold worked surfaces. *W. Lueg.* p. 325The use of automatic recording equipment in the drawing and peeling of steel bars. *F. Kottmeier.* p. 337Study on the swelling problem of steel bars after drawing and pushing-in. *W. Lueg, et alius.* p. 343

Contribution to the problem of shot descaling of wire rod and hot-rolled strip.

H. Sedlacek, et alii. p. 351

Study on the hardness test of thin sheets.

E. Wondris, et alius. p. 356

Stahl und Eisen 80 (1960) Heft 7

Generation of gases for the reduction of iron ores. *H. W. v. Gratkowski.* p. 397

Contribution to the study of the metallurgical principles of oxygen steel making.

E. Plöckinger. p. 407The problem of the safe dimensioning of ball and roller bearings used in rolling mill stands of continuous high-section, wire and strip rolling trains. *H. Pauels, et alius.* p. 417The attitude of workmen in the iron and steel industry against innovations in engineering. *E. A. Jüres.* p. 429The beginnings of the art of plate rolling in Saxony (1823 to 1827) *E. Matthes.* p. 437

Archiv für das Eisenhüttenwesen 31 (1960) Heft 3

Probenahme am Mittelfrequenz-Hochvakuumofen. *H. Baumann, et alii.* s. 133Über den Einfluss der Bindungsform eines Elements auf seine Bestimmung mit der Emissionsspektralanalyse. *P. Dickens, et alius.* s. 135Vorgänge beim Eintreiben von Setzbolzen in Stahl. *K. A. Ebert et alius.* s. 145Die Änderung der Koerzitivkraft bei der Alterung weicher unlegierter Stähle. *M. Nacken, et alius.* s. 153Röntgenographische Untersuchung der Zerrüttung von Stahlproben durch Zug-Druck-Wechselbeanspruchung. *Paul Müller, et alius.* s. 161Untersuchungen über die Oberflächenverformung und die Eindringtiefe der Verformung und die Eindringtiefe der Verformung bei spanabhebender Bearbeitung von Stahl. *F. Lihl, et alius.* s. 173Untersuchungen über die Rekristallisation eines ferritischen Stahles mit 27% Cr unter besonderer Berücksichtigung der Glühdauer. *H. Borchers, et alii.* s. 177Die Analyse des Zementits in Chromstählen durch Messung seiner magnetischen Eigenschaften. *W. Koch, et alii.* s. 183Elektrochemische Messungen über die Passivierung eines Stahles mit 18% Cr und 9% Ni. *A. Rahmel, et alius.* s. 189Korrosionsuntersuchungen an einer gesinterten Legierung mit 60% Ni, 20% Fe und 20% Mo. *H. J. Booss.* s. 195

- Der Einfluss der Oxyde von Magnesium und Aluminium auf die Reaktions-gleichgewichte des Mangans zwischen kohlenstoffgesättigtem siliziumhaltigem Eisen und Kalk-kieselsäure-schlacken bei 1500°C. *H. Schenck, et alius.* s. 199
- Revue de Métallurgie 57 (1960) No.2**
 The utilisation in Italy of natural gas for firing open-hearth furnaces. *C. Barbazanges, et alius.* p. 95
 Heating the open-hearth furnace by natural gas. *F. Bartu.* p. 107
 Experimental investigation of solidification cracks in steels and the influence of impurities. *A. Gueussier.* p. 117
 Brittleness of special steels in the as-cast condition; influence of impurities and structure. *R. Castro, et alius.* p. 135
 Viscosity and structural elements of molten aluminosilicates: $\text{CaO-Al}_2\text{O}_3\text{-SiO}_2$ slags between 1,600 and 2,100 deg. *C. P. Kozakevitch.* p. 149
 Structural heterogeneity in coke. *R. Zoja, et alii.* p. 161
- Stal (1960) No.3**
 Practice in making highbasicity sinter from finely divided concentrates. *N. M. Iakubtsiner, et alii.* p. 193
 Desulfurization of iron in blast furnace. *B. F. Concharov.* p. 204
 Investigation of crust formation in ingots by means of radioactive tracers. *T. M. Saar, et alii.* p. 208
 Formation of internal flaws in square ingots during continuous casting of steel. *V. S. Rutes, et alii.* p. 212
 Production of 19r and 14xrc low-alloy steels without deoxidation by silicon in furnaces. *I. M. Leikin, et alii.* p. 216
 The use of deluting filling materials for reduction of slag inclusions in rimmed steel. *R. Z. Elimelakh, et alii.* p. 219
 Injection of pulverized materials into bottom-blown basic bessemer converter. *I. S. Roginsky.* p. 220
 Absorption of metal by hearth of steel-making furnace. *V. M. Zamoruyev.* p. 223
 Steel-making arc furnaces in foreign countries. *M. A. Shevtsov.* p. 226
 The use of hot metal in steel-making arc furnaces. *Z. V. Klochkova.* p. 228
 The use of perovskite concentrate when smelting ferrotitanium. *I. S. Kumysh.* p. 230
 Two-line rolling with repeaters of deformed concrete-reinforcing bars. *A. F. Minaev, et alii.* p. 234
- Large-diameter tube production practice in the federal republic of Germany and France. *A. I. Tselikov, et alii.* p. 243
 Rational finishing passes for 300mm rolling mill, producing round sections of 14~32mm in diameter. *N. I. Tereshenkov.* p. 253
 Prevention of surface flaws when annealing steel sheets. *K. V. Dneprenko.* p. 255
 Cooling processes for cast billets of high-silicon steels. p. 259
- Stal (1960) No.4**
 Testing of furnace with fluidized bed for magnetic conversion of iron ores. *V. I. Karmazin, et alii.* p. 289
 Production of fluxed sinter from Kertch brown iron ores. *Z. I. Nekrassov, et alii.* p. 293
 Prevention of secondary oxidation of steel. *Iu T. Lukashevich-Duvanova, et alii.* p. 299
 Investigation of operation of equipment of 80-ton steel-melting arc furnace. *A. I. Sapko.* p. 314
 Behavior of various elements when melting steel under vacuum. *A. P. Perov.* p. 319
 Investigation of process of metallic chrome production in vacuum. *G. V. Karsanov, et alii.* 321
 Precised method of roll-pass designing for angles. *B. P. Bakhtinov.* p. 330
 About delivery of rolled products according to their theoretical weight. *G. M. Katsnelson, et alii.* p. 333
 Roller entry guides for rolling rounds. *N. F. Grotsuk, et alious.* p. 338
 Production of large diameter tubes from 19r steel. *A. M. Garagulia.* p. 346
 Influence of gold hardening on texture and properties of ЭИ 437 Alloy. *M. L. Bernshtein, et alious.* p. 358
 Nature of formation of "bright spots" in axle steel. *N. V. Keis, et alii.* p. 363
 Investigation of heating and cooling of coils in bell-type furnaces of KMC. *E. G. Dveirin.* p. 366
 Rising life of ingot moulds. *N. F. Troshin, et alious.* p. 380
