

## INSTRUCTIONS FOR AUTHORS

(August 1993)

**ISIJ International** is published monthly by The Iron and Steel Institute of Japan (ISIJ). Original contributions are invited from worldwide ISIJ members and non-members.

**1. Scope:** The scope of the journal extends from the core subject matter of iron and steel to multidisciplinary areas in the science and technology of various materials and processes. The journal provides a medium for the publication of original studies on all aspects of materials and processes including preparation, processing, properties, characterization and application.

**2. Category:**

(1) **Regular Article** (maximum of ten printed pages): An original article that presents a significant extension of knowledge or understanding and is written in such a way that qualified workers can replicate the key elements on the basis of the information given.

(2) **Review:** An article of an extensive survey on one particular subject, in which information already published is compiled, analyzed and discussed. Reviews are normally published by invitation. Proposals of suitable subjects by prospective authors are welcome.

(3) **Communication** (maximum of three printed pages): An article on a new finding or interesting aspect of an ongoing study which merits prompt preliminary publication in condensed form. Communications are given priority in editorial processing.

(4) **Note** (maximum of three printed pages): A medium for the presentation of (a) criticisms or additional proofs and interpretations in connection with articles previously published in the Institute journals, (b) disclosure of new research and production techniques, and (c) topics, opinions or proposals of interest to the readers.

**3. Language:** All contributions should be written in **English**. Latitude in the spelling, American or English, is allowed, but consistency is required.

**4. Units:** The use of **SI** units is standard. Non SI units approved for use with SI are acceptable.

**5. Submission of manuscript:** Manuscripts should not be submitted if they have already been published or accepted for publication elsewhere. However, as an exception, an English version of a paper appeared in

the Japanese journal of the Institute, "*Tetsu-to-Hagané*", can be accepted provided that two years have not passed since its original publication.

The original and one copy of a manuscript, both complete with Application Form, title page, synopsis and key words, text, references, list of captions, tables, and figures, should be sent to:

The Editorial Board of **ISIJ International**  
The Iron and Steel Institute of Japan  
Keidanren Kaikan 3rd Floor  
9-4, Otemachi 1-chome, Chiyoda-ku  
Tokyo 100, Japan  
(Telephone) 81-3-3279-6021  
(Telefax) 81-3-3245-1355

One set of figures should be of a superior quality for direct reproduction for printing. Papers exceeding the page limits may be returned to the author for condensation prior to reviewing.

**6. Reviewing:** Every manuscript receives reviewing according to established criteria.

**7. Revision of manuscript:** In case when the original manuscript is returned to the author for revision, one clear copy of a revised manuscript, together with the original manuscript and a letter explaining the changes made, must be resubmitted within three months.

**8. Disk-saved manuscript:** To save the printing time and cost, it is desirable for the author to supply the final manuscript of the accepted article in the form of a floppy disk.

**9. Proofs:** The representative author will receive the galley proofs of the paper. No new material may be inserted into the proofs. It is essential that the author returns the proofs before a specified deadline to avoid rescheduling of publication in some later issue.

**10. Copyright:** The submission of a paper implies that, if accepted for publication, copyright is transferred to The Iron and Steel Institute of Japan. The Institute will not refuse any reasonable request for permission to reproduce a part of the journal.

**11. Reprint:** No page charge is made. Reprints can be obtained at reasonable prices.
